

# LabVIEW™ Localization Toolkit 2

Make customers feel at home with your localized LabVIEW software

- display user interfaces in any language
- switch typefaces dependent on the language
- change languages on the fly
- manage translation entries

GmbH

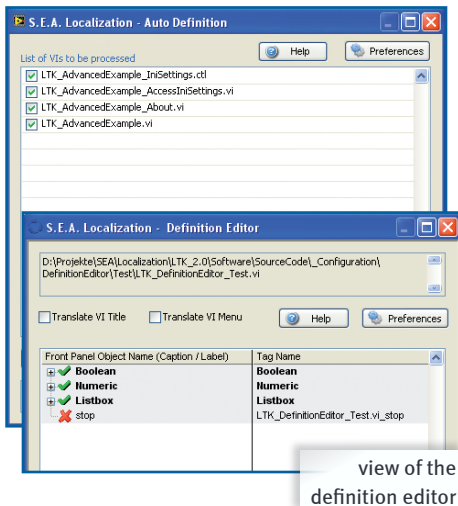

## Sell your LabVIEW software world-wide

The LabVIEW™ Localization Toolkit (LTK) is an add-on package for National Instruments™ LabVIEW™. The LTK enables you to provide user interfaces in any language. It simplifies the generation and maintenance of your world-wide usable LabVIEW applications.

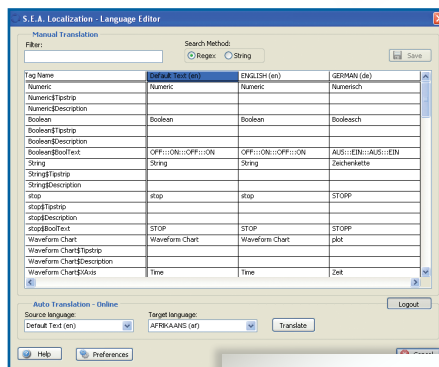

## Simply to apply

Three simple steps enable comprehensive multi-language support for your LabVIEW user-interfaces in a glance.

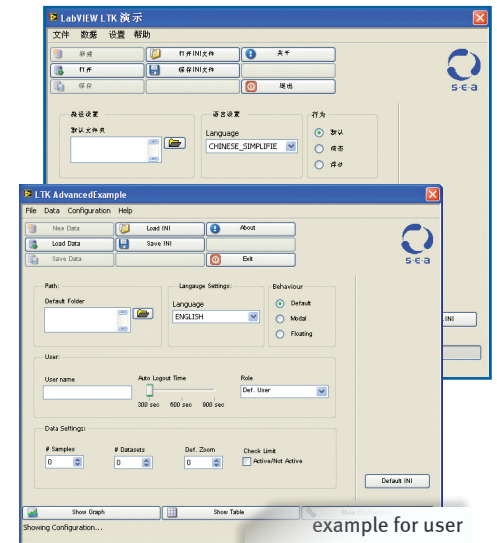

### 1. Define

### 2. Translate

### 3. Use

Language switching can either be performed by the user or under software control. The preview function allows quick control of the translated user-interface during the development or design phase.

## Function highlights of the LTK menus :

- integration of free online translation services with personal account and editable learning dictionaries
- the translation by specialists without the need of LabVIEW or programming expertise
- automated translation of the entire project or individual VIs
- language switching of multibyte languages (e.g. Chinese), select the font and size
- selective translation of individual components
- proof of definition consistency in the entire LabVIEW project

## Technical Information

- full integration with LabVIEW 2009 and higher
- simple and clear API
- compatible with Windows 2000, Windows XP, Windows Vista, Windows 7, Linux is in preparation.

## The LabVIEW™ LocalizationToolkit 2 includes:

- LabVIEW add-on LTK function palette
- language editor tool
- language extractor tool
- example VIs
