

LabVIEW™ Localization Toolkit

Make customers feel at home using your software

- display user interfaces in any language
- switch type faces
- change languages on the fly

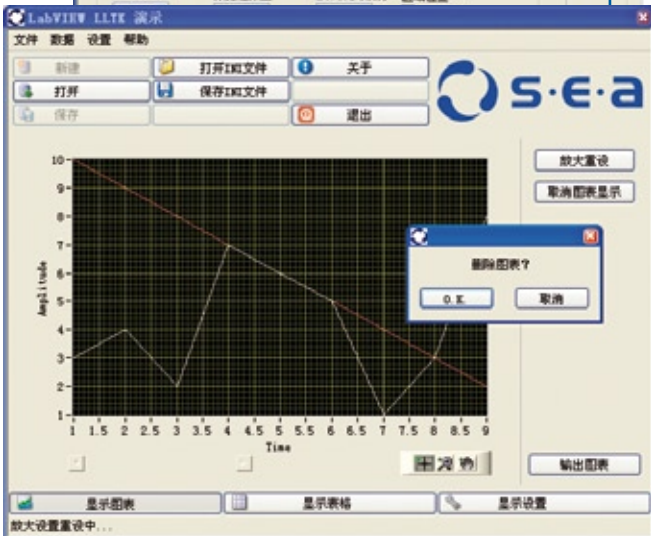

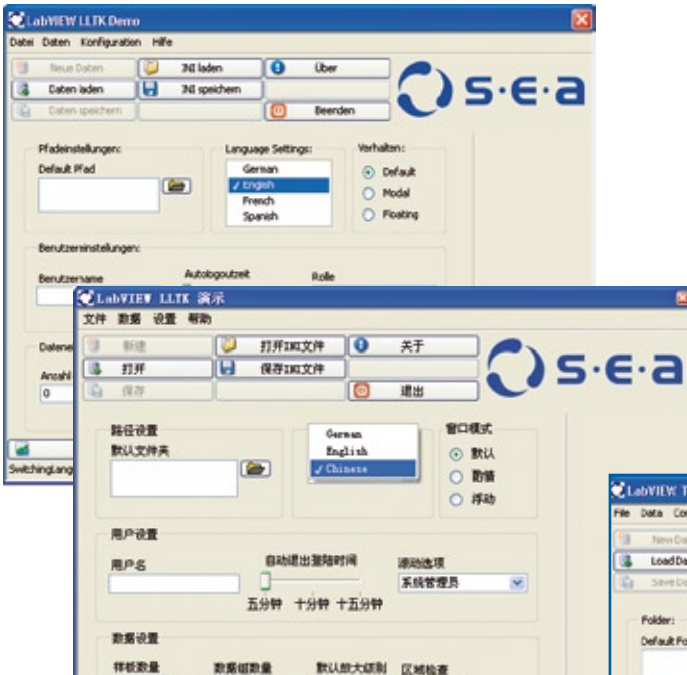

Extend the Market for Your LabVIEW OEM Products:

The LabVIEW™ Localization Toolkit is an add-on package for National Instruments™ LabVIEW™. It allows, to select any language for your software user interfaces. It simplifies the generation and maintenance of your world-wide usable LabVIEW applications.

Application Properties – Customers View

Language and text format of user interfaces are switchable while the software is running. This includes multi-byte characters as Chinese as well as font information as typeface and size. The toolkit is available for Windows® and Linux. The Linux version allows to switch between any language on the fly, while the Windows version allows to switch between languages of one language group on the fly (e.g. Asia, Eastern Europe, Western Europe etc.) without reboot. The LabVIEW Localization Toolkit is based on the experience of many OEM-software solutions provided by S.E.A. operating world-wide.

LabVIEW functions - Programmers View

The LabVIEW Localization Toolkit includes an installer for the LabVIEW Addon palettes with API functions example VIs.

- Easy to use API
- Easy to implement
- Automatic and consistent generation of translation information
- Compatible with LabVIEW 8.0 and higher

The language information is separated from the LabVIEW code for more flexibility. Language information is automatically generated in a simple format, which can be handled by external translation services or even by the customer with standard tools, e.g. text editors or Microsoft Excel®.

Example user interface with language switching function; the language translation tool is not limited to these languages
